

Why You Should Read This: The document below reviews the environmental impact likely from a project. This project is planned to be federally funded through your tax dollars; therefore, you are entitled to take part in its review. If you have concerns about the environmental impact of this project, raise them now. We encourage public input in this decision making process.

IOWA STATE REVOLVING FUND
FINDING OF NO SIGNIFICANT IMPACT

November 4, 2020

To: All Interested Citizens, Government Agencies, and Public Groups

An environmental review has been performed based on the procedures for implementing the National Environmental Policy Act (NEPA), for the proposed agency action below:

Applicant: City of Mount Pleasant
County: Henry
State: Iowa

SRF Number: CS1920780 01
Iowa DNR Project Number: 2015-0081
NE Lagoon and Forcemain Project

The City of Mount Pleasant, Iowa is planning to modify to their wastewater collection system. The city has applied for financial assistance through the State Revolving Fund (SRF) loan program to build the project. The State Revolving Loan Program is a program authorized by the Environmental Protection Agency (EPA) and administered by the Iowa Department of Natural Resources (DNR) in partnership with the Iowa Finance Authority.

The City of Mount Pleasant is located in Henry County, Iowa approximately 45 miles north of Keokuk, Iowa and 85 miles southwest of Davenport, Iowa. The population of Mount Pleasant according to the 2010 US Census was 8,668. The design population equivalent for the year 2038 is 9,500.

The City of Mount Pleasant's wastewater collection and treatment system consists of these major components: a collection system with four sewer sheds, three lift stations, two flow equalization basins, and two treatment plants. The two treatment plants are a sequencing batch reactor (SBR) system and a lagoon treatment system (NE Lagoons). In 2014, new discharge permits were issued for these treatment facilities that included new and/or tighter

limits that would be a hurdle to meet. Namely, the lagoon system received tighter ammonia limits and the SBR plant received requirements for nutrient removal. Both facilities received new limits associated with disinfection. The existing NE lagoons treat approximately 10% of the existing flow on an average basis and were constructed in 1987 with a primary and a secondary cell. Based on historic effluent data, the NE lagoons would be unable to meet the new discharge limits for ammonia and possibly E. coli.

The purpose of this project is to make improvements to the wastewater collection and treatment facilities to enable compliance with the newest discharge limits in order to continue to safely and reliably operate the City of Mount Pleasant's wastewater system for at least the next 20 years. The proposed project includes the abandonment of the north cell of the existing treatment facility, conversion of the south cell of the treatment facility to an equalization basin, and construction of a lift station and force main to redirect wastewater flows to an alternative treatment arrangement. All wastewater that had flowed to the Northeast Lagoons will be redirected to the existing Main Plant to the south of the City and will be treated appropriately there.

Positive environmental effects will be improved treatment of the wastewater from the City of Mount Pleasant, compliance with effluent discharge permit limits, reduced discharge of the pollutants ammonia and E. coli to the receiving streams, and improved water quality in the receiving stream. The project will not significantly affect the pattern and type of land use (industrial, commercial, agricultural, recreational, residential) or growth and distribution of population. The project will not conflict with local, regional or State land use plans or policies.

The project will not impact wetlands. The project will not affect threatened and endangered species or their habitats provided that any tree cutting is conducted between October 1 and March 31 to avoid impacting endangered bats. If any State or Federally listed threatened or endangered species or communities are found during the planning or construction phases, additional studies and/or mitigation may be required. The project will not displace population, alter the character of existing residential areas, or convert significant farmlands to non agricultural purposes.

The project will not affect the 100 year flood plain provided all necessary floodplain development permits, state and local, are obtained and the terms of which are abided by. The project will not have effect on parklands, preserves, other public lands, or areas of recognized scenic or recreational value. No Historic Properties will be adversely affected by the proposed project. However, if project activities uncover any item(s) that might be of archaeological, historical, or architectural interest, or if important new archaeological, historical, or architectural data should be encountered in the project APE, the applicant should make reasonable efforts to avoid further impacts to the property until an assessment can be made by an individual meeting the Secretary of the Interior's professional qualifications standards (36 CFR Part 61).

The project will not have a significant adverse effect upon local ambient air quality provided the applicant takes reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property during the proposed project (567 IAC 23.3(2)“c”). The project will not have a significant adverse effect upon local ambient noise levels, surface water quantity, groundwater quality or quantity, or water supply. No significant impact to surface water quality, fish, shellfish, wildlife, or their natural habitats is expected provided that an NPDES General Permit Number 2 (for storm water discharge associated with construction activities) is obtained and the terms of which are abided by.

Minimum separation distances will be maintained. Noise during construction will be maintained at tolerable levels through controls on construction activities. Any construction debris will be removed from the site for proper disposal. Adverse environmental effects from construction activities will be minimized with proper construction practices, inspection, prompt clean up and other appropriate measures. Areas temporarily disturbed by the construction will be restored.

It has been determined that the proposed action will result in no significant impacts to the surrounding environment. This determination is based on a careful review of the engineering report, the environmental assessment and other supporting data which are on file at the Department of Natural Resources' office in Des Moines, Iowa. These are available for public review upon request. A copy of the environmental assessment is attached. This Department will not take any administrative action on the project for at least thirty (30) calendar days from the above date. Persons disagreeing with the above environmental decision may submit comments to the department during this period. Please direct your comments to me at Jean.Mayne@dnr.iowa.gov or 515-725-0487.

Sincerely,

Jean Mayne

IOWA STATE REVOLVING FUND
ENVIRONMENTAL ASSESSMENT DOCUMENT

PROJECT IDENTIFICATION

Applicant: City of Mount Pleasant
County: Henry
State: Iowa

SRF Number: CS1920780 01
Iowa DNR Project Number: 2015-0081

COMMUNITY DESCRIPTION

Location: The City of Mount Pleasant is located in Henry County, Iowa approximately 45 miles north of Keokuk, Iowa and 85 miles southwest of Davenport, Iowa.

Population: The population of Mount Pleasant according to the 2010 US Census was 8,668. The design population equivalent for the year 2038 is 9,500.

Current Wastewater System: The City of Mount Pleasant's wastewater collection and treatment system consists of these major components: a collection system with four sewer sheds, three lift stations, two flow equalization basins, and two treatment plants. The two treatment plants are a sequencing batch reactor (SBR) system and a lagoon treatment system (NE Lagoons). In 2014, new discharge permits were issued for these treatment facilities that included new and/or tighter limits that would be a hurdle to meet. Namely, the lagoon system received tighter ammonia limits and the SBR plant received requirements for nutrient removal. Both facilities received new limits associated with disinfection. The existing NE lagoons treat approximately 10% of the existing flow on an average basis and were constructed in 1987 with a primary and a secondary cell. Based on historic effluent data, the NE lagoons would be unable to meet the new discharge limits for ammonia and possibly E. coli.

PROJECT DESCRIPTION

Purpose: The purpose of this project is to make improvements to the wastewater collection and treatment facilities to enable compliance with the newest discharge limits in order to continue to safely and reliably operate the City of Mount Pleasant's wastewater system for at least the next 20 years.

Proposed Improvements: The proposed project includes the abandonment of the north cell of the existing treatment facility, conversion of the south cell of the treatment facility to an equalization basin, and construction of a lift station and force main to redirect wastewater flows to an alternative treatment arrangement. All wastewater that had flowed to the Northeast Lagoons will be redirected to the existing Main Plant to the south of the City and will be treated appropriately there.

ALTERNATIVES CONSIDERED

Alternatives Considered: Construction of new treatment units at the NE Lagoons treatment plant to allow for ammonia removal and disinfection was considered as an alternative to sending flows to the SBR treatment facility.

Reasons for Selection of Proposed Alternative: The No-Action alternative is not viable due to the new discharge permit limits which the existing facility cannot meet. The construction new treatment units at the NE Lagoons treatment plant to allow for ammonia removal and disinfection was not selected due to equipment costs, operation and maintenance costs, and efficiency considerations.

The project route was selected for the availability of land, engineering criteria, and ease of maintenance as well as minimization of the impacts to the environment.

MEASURES TAKEN TO ASSESS IMPACT

Public Involvement: A public hearing was held on July 8th, 2020 at 5:30PM at the City's regular council meeting. The public notice of this hearing was published in the Mount Pleasant News on June 4, 2020. The purpose of this hearing was to present the environmental and financial impacts of the proposed improvement project. No written or oral comments were received.

Coordination and Documentation with Other Agencies and Special Interest Groups: The following Federal, state and local agencies were asked to comment on the proposed project to better assess the potential impact to the environment:

- U.S. Army Corps of Engineers
- U.S. Fish and Wildlife Service
- State Historical Society of Iowa (State Historical Preservation Office)
- Iowa DNR Conservation and Recreation Division

Iowa DNR Water Resources Section

Yankton Sioux Tribal Business and Claims Committee
Mount Pleasant Historic Commission

No adverse comments were received from any agencies or general public. Conditions placed on the applicant by the above agencies in order to assure no significant impact are included in the Summary of Reasons for Concluding No Significant Impact section.

ENVIRONMENTAL IMPACT SUMMARY

Construction: Traffic patterns within the community may be disrupted and above normal noise levels in the vicinity of the construction equipment can be anticipated during construction and should be a temporary problem. Adverse environmental impacts on noise quality will be handled by limited hours of contractor work time during the day. Other adverse environmental effects from construction activities will be minimized by proper construction practices, inspection, prompt cleanup, and other

appropriate measures. Areas temporarily disturbed by the construction will be restored. Solid wastes resulting from the construction project will be regularly cleared away with substantial efforts made to minimize inconvenience to area residents.

Care will be taken to maintain dirt to avoid erosion and runoff. The proposed project will disturb soils over an area greater than one acre; therefore, the applicant is required to obtain an NPDES General Permit Number 2 (for storm water discharge associated with construction activities) and abide by its terms. Provided that this permit is obtained and the terms of which are abided by, no significant impact to surface water quality, fish, shellfish, wildlife, or their natural habitats is expected.

Temporary air quality degradation may occur due to dust and fumes from construction equipment. The applicant shall take reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property during the proposed project (567 Iowa Administrative Code IAC 23.3(2)“c”).

This project may require the disposal of sewage sludge. It is the responsibility of the applicant to ensure that the disposal of any sewage sludge complies with applicable requirements found in 40 CFR Part 503 and 567 Iowa Administrative Code IAC 67.

Historical/Archaeological: The State Historical Preservation Office (SHPO), the Certified Local Government and various Native American tribes with an interest in the area were provided information regarding the project. The DNR has determined, and the SHPO has concurred (R&C#200644124), that this undertaking will result in “no adverse effect to historic properties” based on the scope of the project, the prior use of the project area, and the findings of an archeological survey conducted on the project property. However, if project activities uncover any item(s) that might be of archaeological, historical, or architectural interest, or if important new archaeological, historical, or architectural data should be encountered in the project APE, the applicant should make reasonable efforts to avoid further impacts to the property until an assessment can be made by an individual meeting the Secretary of the Interior’s professional qualifications standards (36 CFR Part 61).

Environmental: The project area is an existing wastewater treatment facility (Northeast Lagoons) and municipal ROW. A Joint Application was submitted by the City’s consultant to the Iowa DNR Conservation and Recreation Division and U.S. Army Corps of Engineers. The DNR Flood Plain Management Section will determine if the proposed project requires a permit for impacts to the 100-year floodplain. The DNR Conservation and Recreation Division will determine if the project will impact any State-owned lands or State-listed threatened or endangered species. The U.S. Army Corps of Engineers will determine if the proposed project will impact wetlands or jurisdictional waters of the United States. According to the Iowa DNR Conservation and Recreation Division, the proposed project will not interfere with any State-owned parks, recreational areas or open spaces. The U.S. Army Corps of Engineers concurs that the project will not impact

wetlands. The project will not impact any wild and scenic rivers as none exist within the State of Iowa. The U.S. Fish & Wildlife Service Section 7 Technical Assistance website consultation determined, and Iowa DNR Conservation and Recreation Division agree, that the project will not impact threatened or endangered species or their habitats provided that any tree cutting is conducted between October 1 and March 31 to avoid impacting endangered bats. However, if any State- or Federally-listed threatened or endangered species or communities are found during the planning or construction phases, additional studies and/or mitigation may be required. According to the Iowa DNR Water Resources Section, this project will not impact the 100-year floodplain provided all necessary floodplain development permits, state and local, are obtained and the terms of which are abided by. No adverse impacts are expected to result from this project, such as those to surface water quantity, or groundwater quality or quantity.

Land Use and Trends: The project will not displace population nor will it alter the character of existing residential areas. No significant farmlands will be impacted. This project should not impact population trends as the presence or absence of existing water/sewer infrastructure is unlikely to induce significant alterations in the population growth or distribution given the myriad of factors that influence development in this region. Similarly, this project is unlikely to induce significant alterations in the pattern and type of land use.

Irreversible and Irretrievable Commitment of Resources: Fuels, materials, and various forms of energy will be utilized during construction.

POSITIVE ENVIRONMENTAL EFFECTS TO BE REALIZED FROM THE PROPOSED PROJECT

Positive environmental effects will be improved treatment of the wastewater from the City of Mount Pleasant, compliance with effluent discharge permit limits, reduced discharge of the pollutants ammonia and E. coli to the receiving streams, and improved water quality in the receiving stream.

SUMMARY OF REASONS FOR CONCLUDING NO SIGNIFICANT IMPACT

- The project will not significantly affect the pattern and type of land use (industrial, commercial, agricultural, recreational, residential) or growth and distribution of population.
- The project will not conflict with local, regional or State land use plans or policies.
- The project will not impact wetlands.
- The project will not affect threatened and endangered species or their habitats provided that any tree cutting is conducted between October 1 and March 31 to avoid impacting endangered bats. If any State- or Federally-listed threatened or endangered species or communities are found during the planning or construction phases, additional studies and/or mitigation may be required.

- The project will not displace population, alter the character of existing residential areas, or convert significant farmlands to non-agricultural purposes.
- The project will not affect the 100-year flood plain provided all necessary floodplain development permits, state and local, are obtained and the terms of which are abided by
- The project will not have effect on parklands, preserves, other public lands, or areas of recognized scenic or recreational value.
- No Historic Properties will be adversely affected by the proposed project. However, if project activities uncover any item(s) that might be of archaeological, historical, or architectural interest, or if important new archaeological, historical, or architectural data should be encountered in the project APE, the applicant should make reasonable efforts to avoid further impacts to the property until an assessment can be made by an individual meeting the Secretary of the Interior's professional qualifications standards (36 CFR Part 61).
- The project will not have a significant adverse effect upon local ambient air quality provided the applicant takes reasonable precautions to prevent the discharge of visible emissions of fugitive dusts beyond the lot line of the property during the proposed project (567 IAC 23.3(2)“c”).
- The project will not have a significant adverse effect upon local ambient noise levels, surface water quantity, groundwater quality or quantity, or water supply.
- No significant impact to surface water quality, fish, shellfish, wildlife, or their natural habitats is expected provided that an NPDES General Permit Number 2 (for storm water discharge associated with construction activities) is obtained and the terms of which are abided by.

THEREFORE:

The above project conforms to the criteria in 567 Iowa Administrative Code 92.8(1)“b” relating to compliance with the National Environmental Policy Act of 1969. No adverse effect or significant environmental impact is foreseen at this time.
